                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         603
                                                                                                                                                                                                                                                                                                                 The present sequence is human sphingosine kinase type 1 (hsk1) cDNA. The hsk1 gene is located on chromosome 17q25.2. The sk1 converts the substrate sphingosine to sphingosine-1-phosphate (S1P). The sk1 gene and encoded polypeptide are applicable in screening drug candidates particularly inhibitors for preventing or treating disorders such as haemostasis, thrombosis, allergic reactions, proliferative diseases including cancer, haematopoietic disorders such as leukaemia, cardiovascular diseases such as stroke, atherosclerosis and coronary artery disease, dyslipidaemia, diabetes including type I and type II diabetes, autoimmune and inflammatory diseases such as multiple caclerosis, T helper-1 related diseases, chronic obstructive pulmonary disease, asthma, myocardial infarction, neurodegenerative disorders, natural wound healing processes and embryogenesis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CGCGGCCCTGCCGCGTGCTGCTGCTGAACCCGCGCGCGCAAGGGCAAAGGCCTTGC 126

The present invention describes primer sets for synthesising 5602 full-
length cDNAs defined in the specification, Where a primer set comprises:

(a) an oligo-dr primer and an oligonucleotide comprisentary to the
complementary strand of a polymucleotide which comprises one of the 5602
nucleotide sequences defined in the specification, where the
complementary strand of a polymucleotide which comprises a some of an oligonucleotide comprising a sequence complementary to the
complementary strand of a polymucleotide which comprises a 5'-end
complementary strand of a polymucleotide which comprises a 5'-end
complementary strand of a polymucleotide which comprises a 5'-end
complementary strand of a polymucleotide which comprises a forent complementary to a
complementary strand of a polymucleotide which comprises a feast 15 nucleotides and the combination of
complementary strand of a polymucleotide shich comprises at least 15 nucleotides and the compination of
complementary strand of a polymucleotide shich sequence, where the
complementary strand of sequence is selected from those defined in the
complementary the primer sets can be used in antisense therapy and in
gene therapy. The primer sets can useful for synthesising polymucleotides,
complementary the primers are useful for synthesising polymucleotides,
the full-length cDNAs. The primers are also useful for the
cundatoriarly full-length cDNAs. The primers allow obtaining of the full-length
connas and or diagnosis of the abnormality of the proteins encoded
AMH13613 to AMH1872 represent human amino acid sequences; and AMH13629 to AMH13629 represent
consignation of the abnormal condition of the
condition and sequences, and AMH13629 to AMH13632 represent
                                  Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs.
                                                                                                                                                                                                                        SEQ ID NO 13996; 2537pp + Sequence Listing; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            present invention
                                                                                                                                                                                                                        Claim 8;

The invention relates to a novel method for diagnosing a cancer in a subject. the method comprises determing, in a sample from the subject, the level of at least one polypeptide, where a higher level of the subject, the level of at least one polypeptide in a subject free of cancer is indicative of cancer. The polypeptide in a subject free of cancer is indicative of cancer. The polypeptide is selected from any of the polypeptides listed in the polypeptides cancer is polypeptides of cancer. The polypeptide is selected from any of the polypeptides listed in the polypeptides. The method of the invention has cytostatic activity, and may have a use in gene therapy. The method is useful in identifying may have a use in gene therapy. The method is useful in identifying tissue origin, which may be used in numerous diagnostic and prognostic applications as well as cancer type-specific targets for therapeutic intervention. The compounds that modulate the activity of a tumour suppressor gene are useful in the treatment of cancer or as anti-cancer drugs. The present sequence represents a polynucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAGACCTCCTGACCAACTGCACGCTATTGCTGTGCCGCCGGCTGCTCTCACCCATGAACC 1168

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This invention relates to a novel method of treating a human subject having a tumourigenic disorder or angiogenic disorder, caused by aberrant gene expression or activity of an isolated protein, by administering a modulator. The modulator may have cytostatic, antithyroid, antidiabetic or ophthalmological activity. The method is useful for treating a subject having a tumourigenic or angiogenic disorder, in particular for treating cancer (for example breast cancer, colon cancer, lung cancer or prostatic cancer) and, for example, Grave's disease and diabetic retinopathy. The present sequence is a DNA sequence which encodes the novel isolated human protein 49863 of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         126

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               complementary strand of a polymucleotide which comprises a 5'-end sequence and an oligonucleotide comprises a sequence complementary strand of a polymucleotide which comprises a 3'-end sequence complementary to a polymucleotide which comprises a 1'-end sequence, where the oligonucleotide comprises at 1-east 15 mucleotides where the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polymucleotides, particularly full-length cDNAs. The primers are also useful for the electection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs are present human cpn seperesent human conto sequences; AAH13632 represent collegences; and AAH13632 to AAH13632 represent collegences; and AAH13632 represent collegences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          383
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        443
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            503
                                                                                                                                                                                                                                                                                                                                                                                                              Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dr primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AGCTCTTCCGGAGTCACGTGCAGCCCCTTTTGGCTGAGGCTGAAATCTCCTTCACGCTGA

The invention relates to a novel method for detecting soft tissue sarcoma which comprises obtaining a first soft tissue sample from an individual dard a normal soft tissue sample from the same or different individual, determining the expression of a gene in both samples and comparing the expression of the gene in both soft tissue samples, where a higher level of protein expression in the first soft tissue sample indicates the presence of soft tissue sarcoma. The method of the invention has cytostatic applications and may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic sack sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma-upregulated bNA of the invention. The current sequence is not shown within the specification per se but was submitted in CD format by the inventor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          370
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          126
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             430

The invention relates to nucleic acid sequences (AAV84411 to AAV84633)

cncoding human secreted proteins (AAV88534 to AAV88756). The secreted
cncoding human secreted proteins (AAV88534 to AAV88756). The secreted
cncoding human secreted proteins (AAV88534 to AAV88756). The secreted
CC protein gene sequences are deposited with the ATCC under deposit numbers
CC 209011, 209080, 209081, 209083, 209084, 209085, 209009, 209010,
CC 209011, 209080, 209081, 209083, 209084, 209085, 209511. Host
CC sequences are used for the recombinant production of the secreted
CC proteins. The polynuclectide and anino acid sequences are useful for are
useful for preventing, treating or ameliorating medical conditions e.g.
CC by protein or gene therapy. Pethological conditions can be also diagnosed
CC protein or gene therapy. Pethological conditions can be also diagnosed
CC protein or gene therapy. Pethological conditions are described for each of the polynuclectides.
CC by protein or gene therapy. Pethological conditions are described for each of the polynuclectides.
CC specific uses are described for each of the polynuclectides.
CC specific uses are described for each of the polynuclectides.
CC specific uses are described for each of the polynuclectides.
CC specific uses are described for each of the polynuclectides.
CC specific uses are described for each of the polynuclectides.
CC products for the diagnosis or treatment of cancer, neurodegenerative
CC disorders, developmental abnormalities and foetal deficiencies, block
CC disorders, prostate diseases, lymphomas, inflammation, allergies,
CC schemic shock, Alzheimer's and cognitive disorders, schizophrenia,
CC schemic shock, Alzheimer's and cognitive disorders, schizophrenia,
CC rehymus, disperiive/endoxrine disorders, infections and AIDS. The
CC polypeptides are also useful for identifying their binding partners.
CC describtor line for gene number and clone identification)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           166
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               127 AGCTCTTCCGGAGTCACGTGCAGCCCCTTTTGGCTGAGGCTGAAATCTCCTTCACGCTGA 186

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    g
```

disease

Nucleic acids encoding 207 human secreted polypeptides, useful for preventing, diagnosing and/or treating, e.g. cancers, Parkinson's

and diabetic retinopathy.

WPI; 2001-625724/72. P-PSDB; ABB50380.

proteins (I) and polynucleotide (II) sequences. (I) and (II) have various activities based on the tissues and cells the genes are expressed in. Example of these activities include: immunomodulatory; antisclerotic; dermatological; immunosuppressive; antiinflammatory; immunostimulant; anti-angiogenic; obthialmological; immunosuppressive; antiinflammatory; immunostimulant; anti-angiogenic; opthialmological; or neuroprotective; nootropic; anticonvulsant; antialzheimers; vascular; antiparkinsonian; antimicrobial; and vulnerary. (I) and (II) can be used in the prevention, diagnosis and treatment of immune disorders (e.g. multiple sclerosis, systemic lupus erythematosus and human immunodeficiency virus (HIV) infections), hyperproliferative disorders (e.g. cancers and caucher's diseases), cardiovascular diseases (e.g. Schintar syndrome, Chaga's cardiomyopathy and coronary arteriosclerosis), anglogenic disorders (e.g. conceal graft neovascularisation and diabetic cretinopathy, neurological disorders (e.g. Huntington's chorea, Alzheimer's disease and Parkinson's diseases), infectious diseases and/or for promoting wound healing, regeneration and/or chemotaxis. New isolated protein, useful for preparing a composition for diagnosing or treating cancer, inflammatory, immune or infectious diseases.

Example 1; SEQ ID NO 90; 172pp; English.

useful for preparing a composition for diagnosing or treating autoimmune disorders e.g. multiple sclerosis and systemic lupus erythematosus; haematopoietic cell disorders e.g. agammaglobulineemia and ataxia telangiectasia; blood coagulation disorders e.g. afibrinogenaemia and thrombocytopenia; allergy; graft-versus-host disease; inflammatory conditions e.g. ischaemia-reperfusion injury and arthritis; hyperproliferative disorders e.g. cancer and purpura; infectious disease e.g. viral infection and bacterial infection. The polymucleotide or protein can be used to regenerate damaged tissue e.g. ulcers and Alzheimer's disease. The srequence represents a novel human secreted protein cDNA. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format directly from USPTO at The invention relates to an isolated HEMAE80 protein. The protein is segdata.uspto.gov/seguence.html?DocID=20030065160

The invention relates to an isolated protein comprising amino acid
residues 33-205 or 1-205 of a novel human secreted protein appearing as
residues 33-205 or 1-205 of a novel human secreted protein appearing as
apposed 23.

ABO26252. The protein is encoded by one of 238 disclosed cDNA sequences
concoling 238 secreted proteins. ABO26252 is a precerebellin-like protein.

Also included are a composition comprising the protein and a carrier and
an isolated protein produced by expressing the protein cited above by a
cell, and recovering the protein. The protein cited above by a
cell, and recovering the protein. The protein cited above by a
contracting neurodegenerative and behavioural disorders (e.g. Alzheimer's
disease, Parkinson's disease, Huntington's disease, schizophrenia, mania,
dementia, paramoia, psychoses or autism), immune disorders (e.g. Alzheimer's
infection, inflammation, allergy), liver disorders (e.g. hepatolastoma,
jaundice, hepatitis), immunological disorders (e.g. AlDS, leukaemia,
c'aundice, hepatitis), the 228 diselosed colNNs encoding a novel secreted
c'archimed specification, but was obtained in electronic format directly
c'archimed specification, but was obtained in electronic format directly

The present invention relates to a new method of inducing blood vessel formation in an animal. The method of the invention involves administering sphingosine kinase to the animal. The method is useful for inducing blood vessel formation in an animal, or preventing or treating congestive heart failure, myocardial ischaemia, ischaemia-reperfusion injury and peripheral arterial diseases in an animal, e.g. mammal (such sprimate including human). The invention is also useful for treating injury and disorders selected from coronary artery disease, peripheral vascular disease, wound healing and fracture repair, reconstructive surgery, transplantation such as islet transplants, tendon repair/sports injury, healing of ulcers, thromboangitis obliterans (Buerger's disease), periodontal tissue regeneration and radiocherapy-induced oesophagitis. The present nucleic acid sequence encodes the human sphingosine kinase I (SPHKI) protein as described in the invention

The invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polymucleotides are useful in gene therapy. A composition containing a polypeptide or polymucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression,

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
was normalized. Library was constructed by Life Technologies, a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         BX401290 Homo sapiens HELA CELLS COT 25-NORWALIZED Homo sapiens COT 25-NORWALIZED Homo sapiens CDNA clone CSODK011XD19 3-PRIME, mRNA sequence.

Directionally cloned into EcoRI/Xhol sites using the following 5' adaptor: GGCACGAG(G). Size-selected >500bp for average insert size in 8kb. Library constructed by Ling Hong in the laboratory of Gerald M. Rubin (University of California, Berkeley) using ZAP-cDNA synthesis kit (Stratagene) and Superscript II RT (Life Technologies). Note: this is a NIH_MGC

/note="lst strand cDNA was primed with a NotI-oligo(dT)
primer. Five prime end enriched, double-strand cDNA was
digested with Not I and cloned into the Not I and EcoR v
sites of the pCMVSPORT 6 vector. Library was normalized.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     URL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           443 CTGCACGCTATTGCTGTGCCGCCGGCTGCTGTCACCCATGAACCTGCTGTCTCTGCACAC

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
was normalized. Library was constructed by Life Technologies, a

1st strand CDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and Ecos V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen.

Sequence 2, Application US/10619344

Publication No. US20040086487A1

GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION: Induction of blood vessel formation through administration of
TITLE OF INVENTION: polynucleotides encoding sphingosine kinases
FILE REPRENCE: 4-31617

CURRENT APPLICATION NUMBER: US/10/619,344

CURRENT FILING DATE: 2003-07-14

PRIOR APPLICATION NUMBER: US/09/970,516

PRIOR APPLICATION NUMBER: US/09/970,516
